QUALIFICATIONS

Achievements

- Top-secret Clearance with SCI eligibility (2021) (exp. August 2026)
- Security+ Certification (2025) (exp. January 2028)
- Given kudos after presenting the first automated test case for our software branch under DSI (2025)
- Nominated for a CARES award at the State of Maine (2023)

Techniques

- Highly technical knowledge through **web development**, **DevOps**, and **automation**
- Leadership and communication experience using **agile methodology** and **Jira** by operating collaborating user stories and Kanban boards
- Documentation skills through numerous **Confluence** pages including complete coverage of Eggplant software and missile defense software on onsite servers

Software

- **Angular** – reliably worked tickets under a large team with the federal government developing a full-stack application to meet expectations of multiple product owners
- **JavaScript** – Manipulated JavaScript for various data changes in the federal government and the CDC
- **Java** – Successfully crafted back-end functionality for API calls using Java while working for the federal government
- **C#** – Utilized **ASP.NET** and **ASP Classic** framework to maintain programs using C# and have a strong grasp of the language throughout working with the State of Maine
- **C++** – Under Wright Patterson Cpp files were used for version control and mathematical programming so that unit testing functioned properly
- **Python** – Built multiple scripts i.e. manipulating **JSON** and **NDJSON** files under the Elasticsearch team. Supported python scripting to aid in automating eggplant by generating log files
- **SQL Developer**, **PostgreSQL**, and **SQL Server Management Studio** – Has no problem fixing database related issues or mapping large database tables for programming new functionality
- **Postman** – Resourcefully used postman for testing and debugging website API calls throughout my experience as a web developer
- **React.js**, **Next.js**, and **Tailwind** – easily created my portfolio using powerful react customization
- **Kibana**, **EQL**, and **Lucene** – Competently developed tickets through the Elasticsearch team by organizing data and creating install packages
- **FileZilla** – Independently tested, developed, and released code using FileZilla to manage development, test, and production environments
- **Docker** – Utilized docker commands to streamline programming functionality under Wright Patterson AFB to improve deployment flow while containing data to version control software inside of Jfrog

- **Eggplant** – Established test cases, scripts, and drivers under DSI through eggplant coding to allow automated flow through product lines
- **Gitlab CI/CD**, **Gitlab runners**, and **YAML** – Deployed Gitlab runners that executed jobs to create service containers, security tests, and unit tests for pushing data into Jfrog while working under Wright Patterson AFB. YAML files were used for version control and mathematical programming
- **Git** and **Bitbucket** – Organized, deployed, and collaborated with multiple different teams across many different repositories through all past work experiences
- **Linux/Bash** – Actively programmed using bash scripting in addition to strong familiarity with the Linux operating system to support team development
- **Rocky Linux Distribution** – Acutely created CRON jobs and managed file permissions under Wright Patterson AFB
- **Jenkins** – Crafted a large software feature under DSI to scan every new file that had been pushed for vulnerabilities using Coverity. Additionally supported new pipeline functionality for automation while communicating 24/7 automation to the information systems security manager

WORK EXPERIENCE

Davis Strategic Innovations – **Software Engineer Team Lead** at Huntsville, AL (September 2024 – Current)
under Lockheed Martin

- Over a year of experience developing DevOps pipelines through Jenkins
- Concurrently creating automation software by using Eggplant and Python for the purpose of allowing faster, more accurate programming flow
- Orchestrated presentation skills through creating videos to demonstrate competence for government customers. Teaching experience by instructing an entire team how to use Eggplant software for aiding automation efforts
- Assisted Coworkers, Scrum Master, Product Owner, and Technical Lead by creating Jira stories, providing feedback, and aiding in work management as a professional team leader that changed company flow

Insight Global – **Software Developer** at Dayton, OH (February 2024 – August 2024)

- Six months of experience professionally building and debugging Gitlab pipelines to create a more efficient project environment to house service containers with security information and testing data
- Consistently navigating Jfrog artifactory to solve dependency issues for key libraries and programming Cpp / Hpp files to allow correct mathematical flow

State of Maine – **Computer Programmer** at Augusta, ME (June 2023 – November 2023)

- Six months of experience assisting clients by maintaining web applications through removing bugs, creating features, pushing releases, and communicating expectations
- Frequently monitoring emails to aid clients regarding software installations, database fixes, or general usage in a timely, polite, and intelligent way
- Succinctly learning cybersecurity and programming techniques throughout over 40 hours of professional training

Robins Air Force Base – **Software Developer** at Warner Robins, GA

(July 2021 – March 2023)

- A year of experience implementing Elasticsearch to create visuals, employ machine learning, and organize data
- Six and a half months of developing a large government full stack application that is top-secret

EDUCATION

Tennessee Technological University – Cookeville, TN

(May 2021)

- Bachelor of Science in Computer Science
- Cumulative GPA: 3.54 Graduated with Cum Laude

Motlow State Community College – Tullahoma, TN

(May 2018)

- Associates of Science in Chemistry
- GPA: 3.94
